Senechal is the Louise Wolff Kahn Professor Emerita in Mathematics and History of Science and Technology at Smith College and former editor-in-chief of The Mathematical Intelligencer

Penrose Tilings and the Imagination

To mark the 50th anniversary of Roger Penrose's first steps toward the now world-famous Penrose tilings, we show that these tilings in turn have inspired scientific, geometric, and artistic imaginations. Specific examples include the 2011 Nobel prize in Chemistry, the notion of a stem cell of the solid state, and the "Bird's Nest" Olympic Stadium in Beijing.

**April 20th, 15:00, BME „K” BUILDING,
3RD FLOOR, ROOM K350**
